Forecast for Monday 11 Apr 2022

Weather: A mostly fine and dry day with cloud breaking to give hazy sunshine at times. Strong and gusty east to southeasterly winds developing widely, reaching gale force on higher peaks. A band of showery rain may push northwards across the park during the afternoon, turning briefly heavy in places with the odd rumble of thunder possible. Winds easing through the evening. Largely dry overnight, before an area of rain arrives from the south during the early hours, turning heavy at times as it pushes northwards.

Chance of cloud-free hill tops above 600m: 80%, lowering to 30% in rain overnight.

Low cloud and visibility: Cloud bases well above all summits for much of the day. Cloud becoming extensive and expected to lower overnight to around 400m, mainly in and around rain. Visibility generally good with briefly deteriorations to moderate in any showers if they pass through and moderate, locally poor in any heavier rain overnight.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Developing strong and gusty winds in excess of 40-50mph will give very difficult walking conditions this afternoon with a significant risk of being blown over. Be prepared for occasional lulls and then sudden buffeting on lee slopes and exposed ridges and cols. A significant wind chill is likely on higher peaks.

Recent rainfall: measured at Cat & Fiddle: altitude 511m

Forecast for Tuesday 12 Apr 2022

Weather: Rain, heavy and persistent at times will spread northwards during the early hours, lasting into the morning. A risk of thunder and lightning in heaviest bursts. Drier by late morning, with some brighter spells. However, some sharp showers may develop, possibly merging to form a longer period of rain. Cloud developing on western slopes overnight, with patchy light rain or drizzle likely, clearer in the east of the park.

Maximum wind: Southeasterly 20-30 mph gusting 35 mph, becoming southwesterly 15-20 mph by mid-afternoon.

Chance of cloud-free hill tops above 600m: 30%, becoming 60% during the afternoon outside of any showers.

Low cloud and visibility: Extensive cloud expected above 400m from the early hours, this possibly quite persistent through the morning. Patchy cloud forming on lower slopes during periods of rain. Bases generally lifting to above 600m during the afternoon, with peaks in the east most likely to be clear. Generally moderate or poor visibility during rain or showers, perhaps very poor in any drizzle overnight. Most valleys seeing good visibilities under cloud at times.

Temperature: **Valleys:** Plus 6 Celsius rising to plus 13 Celsius.
At 600m: Plus 5 Celsius rising to plus 11 Celsius.
Freezing level: Well above the summits.
